Different Types of Web Hosting Services

There are many different types of web hosting companies available in the market today. Choosing a web hosting provider depends on what type of website you want to have: hobby, blog, or ecommerce site. As a result, there are different flavors of hosting providers. Some of the most common web site hosting types are: shared, free, and dedicated hosting. Free web hosting services for example, place ads on the user's web pages and can be cumbersome and annoying for visitors. The other web hosting plans offer great support, options, and bandwidth but charge a monthly fee.

Shared Web Hosting

Shared hosting is the most popular web hosting plan, basic. Shared web site hosting permits more than one site to be hosted on the same server. Here, the web hosts provide the system administration and the server maintenance. Benefits of a shared hosting site are programming features such as ASP, PHP, MySQL, large bandwidth, and multiple e-mail address capability. Compared to free web hosting, shared web hosting allows a user to have their own domain name. Shared hosting is a way for a hosting company to offer affordable web hosting to their clients while having more users on one server and thus less overhead costs.

Free Webhosting

Free hosting is the most basic web hosting service. Banners ads are common on this type of website hosting services (for example Geocities or Angelfire). There are a few free web site hosting providers in existence today that provide excellent options but that is the exception to the rule. Most free hosting plans do not provide users with MySQL databases, multiple e-mail

accounts, or the ability to run any scripting language. The type of domain one receives in free web hosting is typically a sub-domain (yoursite.webhost.com) or a directory (www.webhost.com/~yoursite). Our recommendation is to avoid these kinds of web host services. Put a small investment in for cheap web hosting and get your own site, in the long run you will be happier and more satisfied.

Dedicated Web Hosting

Dedicated hosting is a good option for someone who wants more storage and bandwidth and control over the server. The advantages of having dedicated hosting are: unlimited databases and email addresses as well as unlimited bandwidth. Generally, a dedicated server plan offers the user with a monthly bandwidth of 500 GB to 1 TB. Also important to know that there are two types of dedicated web hosting plans: managed and unmanaged. Managed hosting is hosting that is still controlled by the hosting company. In unmanaged dedicated web hosting, the user is the server administrator, permitting the user the greatest amount of control and flexibility. Unfortunately, unmanaged hosting is complicated and takes more time than a managed hosting solution.

This is a quick summary of the plethora of web hosting companies. Yes, we admit, it is a daunting task to find the best hosting service for your needs. First know that the function of the website usually determines the type of web host. Then, the features, support, reliability, and control decide the pricing of a hosting account. At Web Hosting Search, you can browse the site and learn more about hosting, buy a hosting plan, and get your website online.

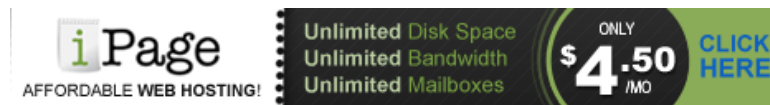

About This Site

We are a group of professional webmasters who have had enough of all the lousy and half-hearted web hosting sites out there. So, we created a site that would credit the best web hosts and warn visitors of the lesser ones, sort the good from the bad.

Here you can read everything you need to know about services like cheap web hosting and dedicated servers, and find reviews of the best webhosting we have encountered.

Our Guarantee

Because thousands of visitors come here everyday, we are able to negotiate very low hosting fees with the providers. As a result, you will receive the lowest price on any hosting service you choose from WebHostingSearch.com.
